

We are looking for:

## Software Developer Delphi (m/f/d)

### Your Tasks

- » Developing and maintaining the established software applications for machine control on Windows operating systems
- » Design and programming of new software modules for the extension of machine functionality in close coordination with product management
- » Independent processing of selected topics within the overall complex of machine and system control
- » Designing future software including architecture and design
- » Creating and revising technical documentation and descriptions for the developed software
- » Independent machine operation within the scope of commissioning and testing of software modules and features
- » Perform error analyses and support colleagues or customers
- » Pay attention to quality, reusability and test coverage during implementation

### Your Profile

- » Degree in computer engineering, electrical engineering, communications or automation engineering or proven experience in the development of larger software projects
- » Programming experience on Windows systems in larger projects for external customers
- » Knowledge of the programming languages Pascal (Delphi), C, C++ (VS)
- » Affinity to automation technology and its implementation in software (sequence controls, motor and I/O technology, interfaces, CAN and EtherCAT)
